

Header background color based on brand.
Light blue for SC, and yellow for OH.
Waiting for exact color codes from Marketing
dept.

The card background will show the trip main
image with a faded gradient

Current passenger count

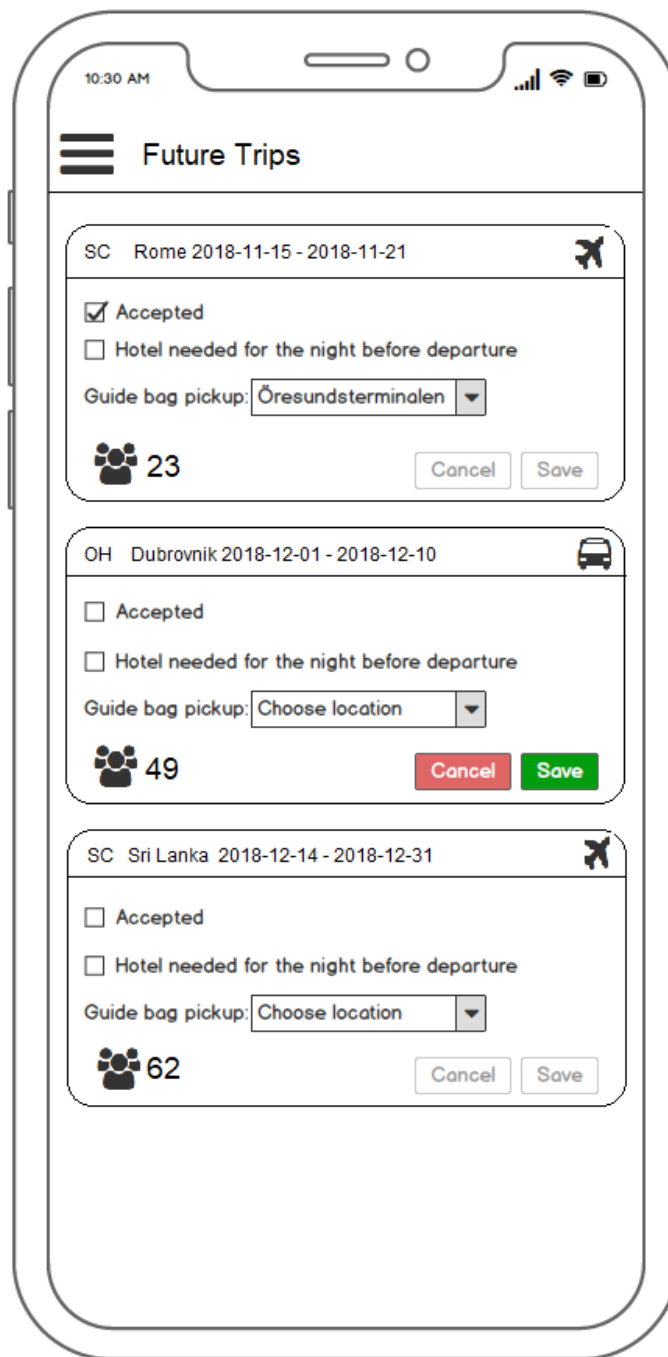

GUI alignment:

The right side of the save button should be
aligned with the right side of the bus/plane
icon.

Both buttons should be centered vertically to
the passenger count icon and text. Buttons
and passengers icon have the same height.

The passenger icon is aligned to the left side
of the checkbox and brand name.

Switch icon based on trip type.
Either plane or bus

General

- Sort chronologically ascending, i.e. nearest in future first in the list.
- Swipe down to refresh data from backend. A separate URL is used to retrieve just the future trips. Merge response with current data based on id.
- More interactive elements due soon. The most important right now is 'Accepted' which will tell the Guide Manager that the guide has accepted the assignment.

Changed state will enable the cancel and
save buttons. Cancel resets state, and save
sends the modifications to the backend. URL
details to be decided.

Save should have a spinner when until the call
is finished.

If it's easy to implement, a toast would be
nice with either a positive text on 200 or a
error text otherwise.
