< > Done

1	2 ABC	3 DEF
4 GHI	5 JKL	6 MNO
7 PQRS	8 TUV	9 WXYZ
	0	

Changing passenger information:

1. User clicks the edit button (yellow)
2. Enters phone input, which brings up a numeric keyboard
3. User enters a new phone number, and clicks "Done" when finished.
4. User exits edit mode by clicking the edit button again.

After step 4 the information is stored in the app separate from the data pulled from the backend.

For example something like:

```
{
  passengerData: {
    123: { phone: '+46704564564', comment: 'vegetarian, allergic to seafood' }
  }
}
```

The same applies for the comment section, except that it will bring up a normal keyboard.

When not in edit mode, the interface looks like this:

Cell phone:
+46704564564

Comment:
Vegetarian, allergic to seafood

If no phone number exists:

Cell phone:

Comment:
Vegetarian, allergic to seafood
