Annotations

A badge will be visible in the drawer if one or more past trips needs input from the guide. The number inside the badge reflects the number of past trips with overdue input.

➡

The UI is similar to the Future Trips view.

In this case just one trip needs input from the guide. When the guide clicks "Upload report", the badge will go away in the drawer. The card will change UI to the card above, i.e. static text "Report uploaded: 2018-12-01" instead of a button.

If at all possible in expo, and prio 2 or 3 right now:

· Can the app icon show a badge?
· It would be nice if the app at startup could show a modal popup if there is a past trip with no reported data, and the possibilty to either navigate directly to this view, or disimiss the popup.
